

# MaxEcho Roadmap

## Vision

MaxEcho is a local-first AI meeting assistant that can:

- transcribe conversations
  - generate summaries and action items
  - help during meetings and sales calls
  - work offline by default
  - optionally use cloud AI for faster or smarter processing
- 

## Phase 1 — Core Offline Notes MVP

Goal: A working local AI note-taking assistant.

### Features

- ☒ Audio recording
- ☒ Local Whisper transcription
- ☒ Local Ollama summaries
- ☒ Markdown export
- ☒ Auto-generated filenames
- ☐ Start/stop recording
- ☐ Better transcript cleanup
- ☐ Improved note templates
- ☐ Better Dutch prompting
- ☐ Audio device selection

### Tech Stack

- Python
- Faster-Whisper
- Ollama
- Llama 3.2
- FFmpeg

### Deliverable

A CLI-based local AI note-taking workflow.

---

## Phase 2 — Desktop Application

Goal: Turn MaxEcho into a usable desktop product.

## Features

- [ ] Desktop UI
- [ ] Start/stop buttons
- [ ] Live transcript panel
- [ ] Summary panel
- [ ] Action item panel
- [ ] Recording history
- [ ] Open notes folder
- [ ] Drag & drop audio files
- [ ] Settings screen

## Tech Stack

- Tauri
- React
- TypeScript

## Deliverable

Cross-platform desktop app.

---

# Phase 3 — Real-Time Meeting Mode

Goal: Provide near real-time live meeting assistance.

## Features

- [ ] Streaming transcription
- [ ] Chunked transcript processing
- [ ] Real-time summary updates
- [ ] Speaker detection
- [ ] Live meeting timeline
- [ ] Important moment detection
- [ ] Smart highlights

## Deliverable

Live meeting assistant.

---

# Phase 4 — Sales Copilot Mode

Goal: Provide live sales guidance during calls.

## Features

- [ ] Objection detection
- [ ] Real-time response suggestions
- [ ] Sales coaching prompts
- [ ] Sentiment analysis
- [ ] Buying signal detection
- [ ] Suggested follow-up questions
- [ ] Live “what to say next” cards

## Example Use Cases

- Price objections
- Competitor comparisons
- Customer hesitation
- Upsell opportunities
- Discovery questions

## Deliverable

AI-assisted sales conversation support.

---

# Phase 5 — Mobile Companion

Goal: Allow mobile phone conversations to connect to MaxEcho.

## Features

- [ ] Mobile microphone streaming
- [ ] QR code pairing
- [ ] Phone call mode
- [ ] Bluetooth microphone support
- [ ] Mobile live transcript view

## Deliverable

Phone + desktop hybrid workflow.

---

# Phase 6 — Cloud & Hybrid AI

Goal: Support both local and cloud AI workflows.

## Features

- [ ] OpenAI integration

- [ ] Anthropic integration
- [ ] Hybrid mode
- [ ] Faster cloud summaries
- [ ] User-selectable models
- [ ] Cost optimization

## Modes

- Local-only
- Cloud-only
- Hybrid

## Deliverable

Flexible AI backend system.

---

# Phase 7 — Team & Business Features

Goal: Expand MaxEcho for professional usage.

## Features

- [ ] Shared meeting notes
- [ ] CRM integration
- [ ] Notion integration
- [ ] Export to PDF
- [ ] Team workspaces
- [ ] Searchable meeting archive
- [ ] AI memory/context system

## Deliverable

Professional collaboration platform.

---

# Long-Term Vision

MaxEcho becomes:

“A local-first AI meeting and conversation assistant that helps people remember, organize and improve conversations in real time.”

Core principles:

- Local-first
- Privacy-focused
- Fast

- Minimal
- Useful
- AI-enhanced without being intrusive
